PROFESSIONAL SUMMARY

Backend developer and Computer Science undergraduate with projects in Java, Go, and Python focused on APIs, concurrency, AWS, and command-line tools. Hands-on experience with business rules, transactions, automated testing, databases, containers, and CI/CD. Focused on reliable systems, clear architecture, and explicit failure handling.

TECHNICAL SKILLS

Languages: Java 17, Java 21, Go, Python 3.11+, SQL, Bash
Backend and APIs: Spring Framework, REST, GraphQL, gRPC
Data: PostgreSQL, SQLite, Redis, Flyway
Cloud and infrastructure: AWS (Lambda, API Gateway, SDK for Go v2, SAM, IAM), Docker, Docker Compose, GitHub Actions, CI/CD, Git, Linux
Testing and fundamentals: JUnit 5, Mockito, Testcontainers, pytest, data structures and algorithms, object-oriented programming, concurrency, transactions
Language proficiency: Intermediate English

SELECTED PROJECTS

Wallet API — Java 21 · Spring Boot · PostgreSQL · Docker

- Built a REST transfer API with monetary rules, validation, BCrypt, Flyway migrations, and *application/problem+json* responses.
- Protected atomic debit and credit against double spending through transactions and deterministically ordered pessimistic locks; added *Idempotency-Key* handling and bounded, durable notification retries with *FOR UPDATE SKIP LOCKED*.
- Validated rollback, concurrency, idempotent replay, timeouts, and outages in 58 tests, including 36 integration tests against real PostgreSQL through Testcontainers.

Ayvu — Python 3.11+ · SQLite · pytest

- Built a local-first CLI for EPUB translation and review that preserves HTML, CSS, images, links, and inline markup while translating only reader-visible text.
- Implemented preview and batch workflows, SQLite caching, checkpoints and resume, glossaries, similarity-based memory, CSV review, concurrency controls, and output validation.
- Maintained 468 automated tests while evolving the project toward a project- and job-oriented modular architecture reusable by a future desktop interface.

Lume — Programming language · Java

- Evolved jlox into a language with a Scanner -> Parser -> Resolver -> TypeChecker -> Interpreter pipeline, static inference, and pre-execution type validation.
- Implemented closures, classes, inheritance, traits with explicit conflict resolution, typed collections, modules, and a REPL, validated by 191 integration scenarios.

Tailwarden Backend Challenge — Go · AWS · CI/CD

- Built a REST API with AWS SDK v2 to inventory Lambda functions across multiple regions, including pagination and runtime, region, and tag filters.
- Applied bounded worker pools, deterministic ordering, and partial-failure tolerance; deployment uses SAM/API Gateway and GitHub Actions with OIDC.

EDUCATION

B.S. in Computer Science — UniFil · Currently enrolled

CERTIFICATIONS AND ACHIEVEMENTS

TCS CodeVita Season 13: global rank 8,005 in an international programming competition.
Oracle (2026): Become an Oracle Agentic AI Foundations Associate.
Udemy — EmbarkX (2026): Java Spring Boot Full Stack: eCommerce Project Masterclass · 93 hours.
